International Trade: Theory, Evidence and Policy provides an integrated non-mathematical account of trade theory and policy that can be read straight through. The footnotes provide caveats, extensions and entry points, or further reading. This book is divided into three parts. The first part focuses on the core theoretical analysis of international trade that has evolved over a quarter-century. The second part reviews recent empirical research in global value chains, trade costs, and heterogeneous firms, particularly from analyzing large datasets of individual firms' characteristics and of trade flows disaggregated to very finely detailed levels. The third section of the book analyzes trade policies and discusses current policy debates. This edition is based on Pomfret's Lecture Notes on International Trade Theory and Policy, first published in 2008. The content has been extensively updated and revised to stand as a new volume.

Revision of the 2008 publication International economics, condensed to fifteen chapters and designed for single-semester courses combining international trade and macroeconomics. Second ed. also available in a 22-chapter version titled International economics.

Along with its painful economic costs, the financial crisis of 2008 raised concerns over the future of international policy making. As in recessions past, new policy initiatives emerged, approaches that placed greater importance on protecting national interests than promoting international economic cooperation. Whether in fiscal or monetary policies, the control of currencies and capital flows, the regulation of finance, or the implementation of protectionist policies and barriers to trade, there has been an almost worldwide trend toward the prioritizing of national economic security. But what are the underlying economic causes of this trend, and what can economic research reveal about the possible consequences? Prompted by these questions, Robert C. Feenstra and Alan M. Taylor have brought together top researchers with policy makers and practitioners whose contributions consider the ways in which the global economic order might address the challenges of globalization that have arisen over the last two decades and that have been intensified by the recent crisis. Chapters in this volume consider the critical linkages between issues, including exchange rates, global imbalances, and financial regulation, and plumb the political and economic outcomes of past policies for what they might tell us about the future of the global economic cooperation.

The social sciences, especially economics, management, and organizational science, are experiencing a tremendous renewed interest for their epistemological and methodological statutes, as witnessed by the many books and specialized journals established during the last two decades. Relational Methodologies and Epistemology in the Economics and Management Sciences identifies and presents the four main network-based methodologies including network analysis, Boolean network simulation modeling, artificial neural network simulation modeling, and agent-based simulation modeling in addition to their conceptual-epistemological implications and concrete applications within the social and natural sciences. Featuring a critical assessment of relational methodologies and their practical applications, this timely publication is ideal for use by corporate R&D
Trade is a cornerstone concept in economics worldwide. This updated second edition of the essential graduate textbook in international trade brings readers to the forefront of knowledge in the field and prepares students to undertake their own research. In Advanced International Trade, Robert Feenstra integrates the most current theoretical approaches with empirical evidence, and these materials are supplemented in each chapter by theoretical and empirical exercises. Feenstra explores a wealth of material, such as the Ricardian and Heckscher-Ohlin models, extensions to many goods and factors, and the role of tariffs, quotas, and other trade policies. He examines imperfect competition, offshoring, political economy, multinationals, endogenous growth, the gravity equation, and the organization of the firm in international trade. Feenstra also includes a new chapter on monopolistic competition with heterogeneous firms, with many applications of that model. In addition to known results, the book looks at some particularly important unpublished results by various authors. Two appendices draw on index numbers and discrete choice models to describe methods applicable to research problems in international trade. Completely revised with the latest developments and brand-new materials, Advanced International Trade is a classic textbook that will be used widely by students and practitioners of economics for a long time to come. Updated second edition of the essential graduate textbook Current approaches and a new chapter on monopolistic competition with heterogeneous firms Supplementary materials in each chapter Theoretical and empirical exercises Two appendices describe methods for international trade research

Revised and updated for the 2nd edition, this textbook guides the reader towards various aspects of growth and international trade in a Diamond-type overlapping generations framework. Using the same model type throughout the book, timely topics such as growth with bubbles, robots and involuntary unemployment, financial integration and house price dynamics, policies to mitigate climate change and the persistence of religion in a globalized market economy are explored. The first part starts from the “old” growth theory and bridges to the “new” growth theory (including R&D and human capital approaches). The second part presents an intertemporal equilibrium theory of inter- and intra-sectoral trade, investigates innovation, growth and trade and limits to public debt as well as nationally and internationally optimal climate policies. The debt dynamics of the Euro Zone and the origins of intra-EMU and Asian-US trade imbalances are also explored. The book is primarily addressed to upper undergraduate and graduate students wishing to proceed to the analytically more demanding journal literature.
